

The Lakhovsky Multiple Wave Oscillator Secrets Revealed

- Fifth edition -

Bruno Sacco
Tony Kerselaers

MULTI WAVE RESEARCH

“The important physical phenomena that has been given to me to be discovered and which are not yet conveniently studied deeply for lack of suitable instruments (wave meters, mirror galvanometer, tubes filled of rare gas or to different rarefaction, localizers, micro-voltmeters, ohmmeters, etc.), make me to believe that its scientific importance will be recognized in future as extraordinary. “

Doctor Nicola Gentile
(About the Lakhovsky MWO, Medicina Nuova, 1935)

Fifth Edition, spring 2019

Torino, Italy
Herselt, Belgium

Designations used by companies to distinguish their products are often claimed as trademarks. All brand names and product names used in this book are trade names, service marks, trademarks or registered trademarks of their respective owners. The authors are not associated with any product or vendor mentioned in this book. This publication is designed to provide accurate and authoritative information in regard to the subject matter covered. If professional advice or other expert assistance is required, the services of a competent professional should be sought.

DISCLAIMER

This book is a research publication of Multi Wave Research. It contains accurate analysis of the original Lakhovsky Multiple Wave Oscillator produced by C.O.L.Y.S.A. in France during 1931 and 1940. Relevant original documents are translated and added to this book. The discussed material is never been published before and it provides the knowledge to build Lakhovsky Multiple Wave Oscillators and open doors for further experimentation in this field by competent researchers.

Read this book thoroughly before undertake any experiments. High frequency, high voltage electric apparatus can cause serious shock injury or death and should only be handled by knowledgeable, competent people. All experiments are conducted solely at your own risk. We disclaim any responsibility for the use or misuse of any information in this book. While this book touches on the subject of human health, all information should be considered as anecdotal and should not in any way be used to construct a medical device. We are not qualified to give medical advice and the use of experimental equipment and research techniques described in this book may provide a false sense of security wherein one may neglect medical care.

Important: it must be kept in mind that experiments with Tesla coil like devices (as with all high frequency emitting devices) can result in serious faults to nearby electronic devices. The generated interference to life sustaining devices, including pacemakers, can result in injury or death.

Please read also carefully Section 16 "Warnings"

About the Authors

Bruno Sacco is an Electrical Radio Engineer. He graduated at Politecnico di Torino in 1988. He has been working at Alenia-Galileo where he was involved in antennas and radar measurement systems. Now he works for RAI Research Center (Radio and TV) where he is involved in digital transmission, RF design and laboratory measurements.

Tony Kerselaers is an Electrical Radio Engineer. He graduated at HIDN Mechelen in 1980. He has been working for Philips Electronics for many years on RF products and antenna systems. He works currently for NXP Semiconductors on antennas, communication systems and personal health products. Tony filed 80+ patents in this field.

Authors' Acknowledgments

The authors give heartfelt thanks to Jean Claude Dupuy, our colleague researcher, Roger Blain, researcher and MWO member of the first hour and Mr. Gianfranco Galvani of the Rimini Lakhovsky Center in Italy. We are grateful for the support by the many consulted specialists and especially to Dr. Massimo Balma, Prof. Pierluigi Civera, Dr. Prof. Franco Bistolfi and Prof. Mauro Brescia and Dr. Massimo Nardi for long and interesting technical and historical discussions. To Luciano Bezerédy, who knew Boris Vassileff and witnessed the use of MWO, for his kind cooperation. Additionally we like to thank Guy Thieux for providing his historical letters. Finally the authors wish to thank their families, who once again put their lives on hold during many travels and hours spend on research.

Table of contents
